Overview of Project

/Preface

“Learning is not merely about acquiring knowledge, but actively applying it in pursuit of understanding and growth”

- Laboratories are the crucibles of innovation, where ideas become reality and mysteries are unraveled through meticulous processes and expertise, driving scientific progress in our ever-evolving world.
- In today's complex, collaborative landscape, effective laboratory management is key. The Laboratory Management System (LMS) embodies efficiency, integrating technology and workflows to empower scientific exploration.

“Welcome to the Laboratory Management System – where innovation knows no bounds, and discovery knows no limits.”

Acknowledgement

“Success can never attained without valuable guidance”

Successful completion of a project of any size requires co-ordination and co-operation of all the team members. A successful project is a culmination of efforts by many people, some directly involved, other that quietly encouraged and extended this support while being in background.

We are grateful and thankful to professors of our college. Who give us a good guidance and give suggestions about each and every topic which we have study and research. They give us a guidance about are current project.

We thank from the bottom of our heart to our principal, Respected Mr. Ahesanali sir, and our professor Mr. Siraj sir, who helps us time to time.

With warmest regard,

Sabbirali H.B.

Ikramali H.A.

Tool & Technology

1. Software Requirement

- i. Platform: Windows 7+
- ii. Frontend Technologies: HTML, CSS, JavaScript
- iii. Backend Framework: PHP (with Laravel)
- iv. Preferred Browser: Google Chrome

2. Hardware Requirement

- i. Processor: Intel Core i3 or higher
- ii. RAM: 4 GB
- iii. Storage: 128 GB SSD

Description:

Our Laboratory Management System (LMS) harnesses Laravel's robust capabilities for seamless performance on Windows 7+. With HTML, CSS, and JavaScript, the frontend offers intuitive navigation. Backed by PHP integrated with Laravel, our LMS ensures efficient data management. For the best experience, we recommend using Google Chrome for compatibility and performance.

Introduction

- Pathology Lab Management System can be used in a pathology to book a test for the customer, enter customer's details and after conducting the test, give test reports to the customer.
- Pathology Lab Management System efficiently manages pathology lab records, including test results, customer information, and optimizing storage and retrieval processes for enhanced efficiency.
- The software facilitates the entry and management of customer details, ensuring accuracy and accessibility of information crucial for conducting tests and delivering results promptly.

Need for system development

- A database is created to store all user data.
- The Pathology Lab Management System can be utilized in any Pathology Center to book tests for customers.
- Detailed reagent management includes available stock information and alerts for planning purchases based on predefined minimum stock values.
- It reduces patient workload and saves patient time.
- Comprehensive reagent management features provide detailed insights into available stock levels and trigger alerts for timely procurement based on predefined thresholds.
- Users have the option to download test reports for easy access and reference.

Types of user

1. Administrator

- Responsible for overall system management and configuration.
- Grants access permissions to other users.
- Manages user accounts and roles.
- Monitors system performance and security.

2. Laboratory Technician

- Performs laboratory tests and analyses on samples.
- Enters test results into the system.
- Manages sample inventory and reagents.
- Generates test reports for review and

3. IT Support Staff

- Provides technical assistance and troubleshooting support.
- Ensures system availability and reliability.
- Performs system upgrades and maintenance tasks.
- Implements data security measures and backup procedures.

System investigation

- System testing is the first step in a system development project.
- The current project focuses on developing a website tailored for research laboratories, serving as a platform for both research activities and testing purposes.
- Database objects can be added ,A database is created so that all user data is stored in the database.
- Database management features enable the seamless addition of new database objects, reinforcing the scalability and adaptability of the system to accommodate evolving requirements.
- User access to the website is contingent upon the creation of a dedicated account, ensuring secure and authorized entry into the system while maintaining data integrity and confidentiality.

Second Level.

- Admin possesses privileged access to user profiles and appointment data, facilitating efficient management and coordination within the laboratory ecosystem.

Data directory

No.	Table Name	Description
1	appointments	To store appointment information
2	contactus	To store contactus information
3	roles	To store roles information
4	roleuser	To store roleuser information
5	Users	To store user information

Appointments **table**

No.	Field Name	Data Type	Constraint	Description
1	id	bigint(20)	A.I/P.K	Appointment id
2	name	varchar(30)	Not null	Name of Patient
3	address	text	Not null	Patient Address
4	appointment_date	date	Not null	Appointment Date
5	phone	varchar(30)	Not null	Patient Mobile No.
6	u_id	bigint(20)	Not null	Patient Id
7	status	enum('Pending', 'Rejected', 'Success')	Not null	Appointment Status
8	path	varchar(30)	nullable	Report Path
9	deleted_at	timestamp	nullable	Deleted or not
10	created_at	timestamp	nullable	Create date
11	updated_at	timestamp	nullable	Update date

Contactus table

N o.	Field Name	Data Type	Constraint	Description
1	id	bigint(20)	A.I/P.K	Contact id
2	name	varchar(30)	Not null	Name of user
3	email	varchar(40)	Not null	User Email
4	number	varchar(30)	Not null	User Mobile No.
5	message	text	Not null	User Message
6	created_at	timestamp	Nullable	Create date
7	updated_at	timestamp	Nullable	Update date

Roles table

No.	Field Name	Data Type	Constraint	Description
1	id	bigint(20)	A.I/P.K	role id
2	name	varchar(20)	Not null	Name of role
6	created_at	timestamp	nullable	Create date
7	updated_at	timestamp	nullable	Update date

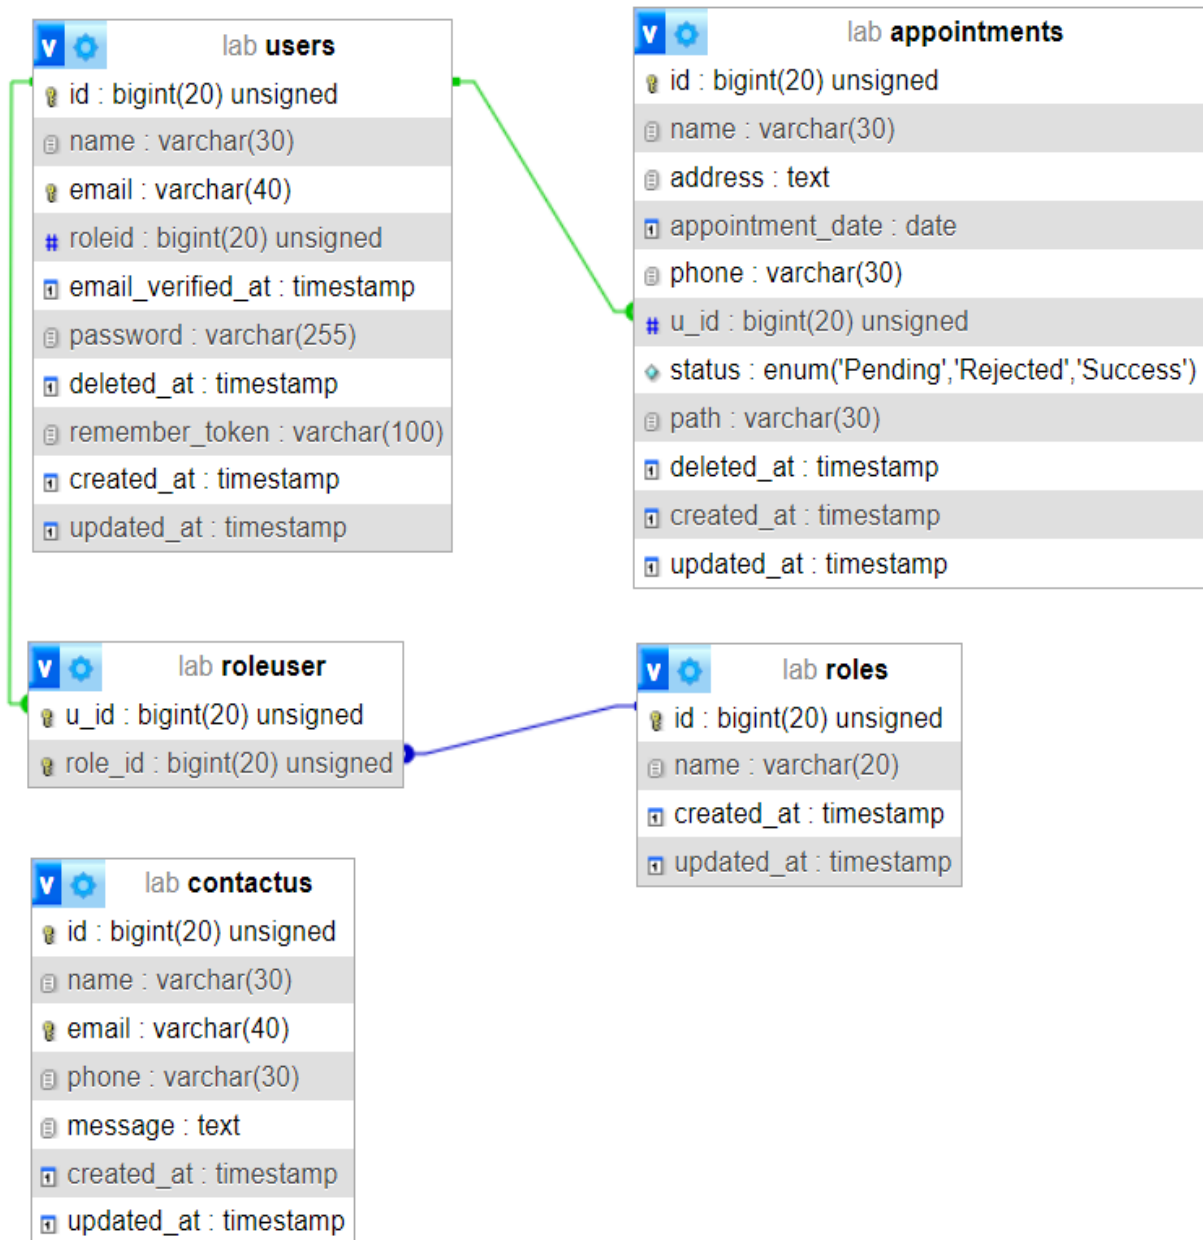

Roleuser table

No.	Field Name	Data Type	Constraint	Description
1	u_id	bigint(20)	P.K	user id
2	role_id	bigint(20)	P.K	role id

User table

No.	Field Name	Data Type	Constraint	Description
1	id	bigint(20)	A.I/P.K	user id
2	name	varchar(30)	Not null	Name of User
3	email	varchar(40)	Not null	User email
4	roleid	bigint(20)	Not null	Role id
5	email_verifie d_at	timestamp	nullable	Email verification date
6	password	varchar(255)	Not null	password
7	deleted_at	timestamp	nullable	Deleted or not
8	remember_to ken	varchar(100)	nullable	Remember token
9	created_at	timestamp	nullable	Create date
10	updated_at	timestamp	nullable	Update date

ALLERGY

MedLab Laboratory offers allergy testing for common allergic reaction triggers and for occupational allergens, including chemicals, insects, and drugs.

DIABETES TESTING

MedLab Laboratory provides a variety of diabetes risk panels to meet the needs of your particular patients and your practice.

PATHOLOGY TESTING

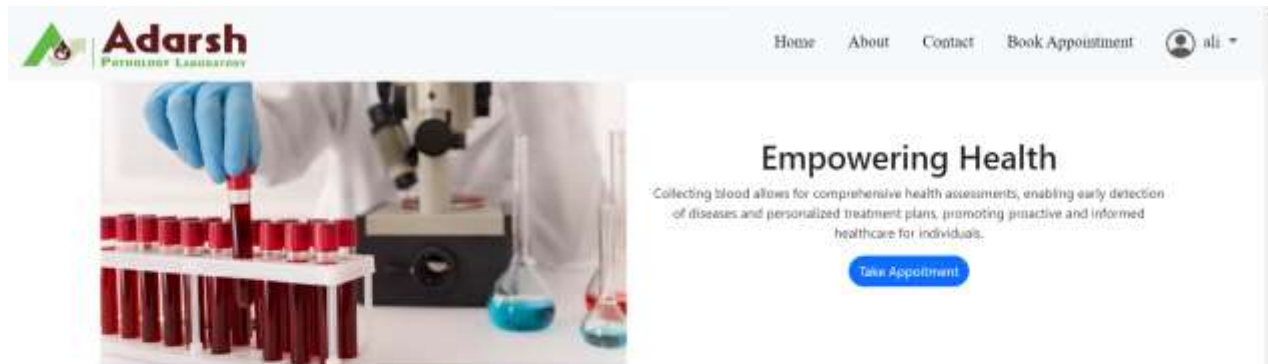

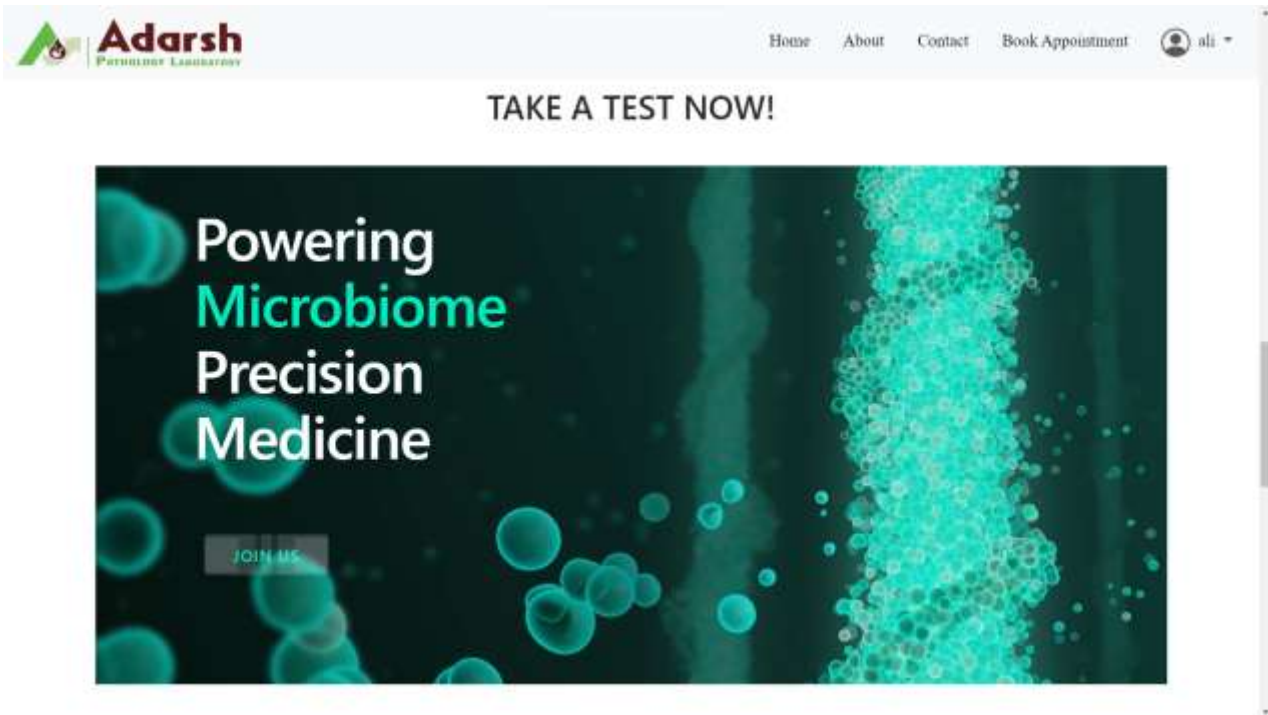

MedLab offers diverse tissue pathology & histology services, focusing on gynecologic, gastroenterology, dermatology examinations & more.

About

We love what we do and we would love to do it with you - our customer. We build mobile laboratories for schools that cannot afford conventional labs and ask sponsors to help fund them. We have three types that appeal to schooling set ups.

Laboratories are pivotal environments for scientific exploration, experimentation, and discovery. These specialized spaces serve as the cornerstone of scientific inquiry, allowing researchers, scientists, and students to delve into various disciplines and uncover fundamental truths about the world.

To become the leading manufacturer and supplier of
